Version 3.0	2018-04-13	ISSO	

Summary

This Communication Plan is an important part of BIMplement project since it will guide the messages to the project's affected stakeholders. How well the partners communicate throughout the life cycle of the project can make the difference between success and failure.

This Communication Plan defines the general communication requirements for the project and includes:

- Dissemination and Communication Strategy
- Dissemination Content
- Target Groups and Main Stakeholders
- Dissemination Channels
- Report on undertaken Dissemination Activities
- Appendices

It's important to note that changes may need to be made to this plan as the project moves forward.

This Plan will be subject to revision on a yearly basis. A final version will be submitted at the end of the project as a final report (D.6.6) on all undertaken dissemination activities.

1. Dissemination and Communication Strategy

Communications management is about keeping everybody in the loop. The main goal of this plan is to provide the right information to the right person at the right time in a format that works for them. Having a plan will:

- Consolidate the project visibility among stakeholders and the general public at EU level and beyond
- Set expectations with stakeholders and the project team.
- Improve decision making.
- Keep the team up-to-date with current and upcoming tasks.
- Define roles and responsibilities.
- Improve procedures.
- Outline processes for dealing with risks and issues.

While dissemination activities focus on knowledge and information transfer towards stakeholders and specific specialists, communication activities complement the project dissemination as they add public value to the achievements of the project by aiming at larger audiences.

2. Dissemination Content

2.1 Objective

Nearly Zero Energy Building (nZEB) construction and renovation need an enhanced systematic approach for the **quality control of the entire process**. This is the first prerequisite to reduce the gap between designed (predicted) and actual performances of buildings, both in terms of energy efficiency and in indoor environmental quality. The most important part of this enhanced quality control approach is a **fully qualified and equipped workforce**, capable to implement, execute and perform all the necessary labor actions with a full understanding of the responsibility of their own profession and actions, as well as the relation with the other involved professions and actions within the value chain. BIMplement will offer a methodology to create and standardize the needed qualifications and a range of learning tools to unlock and implement these qualifications. To be future-ready subject specific qualifications will be enriched with the skills and competences needed when performing the job in a nZEB project that is using BIM. By using a standardised methodology the created qualifications will be transparent and comparable between EU member states, thus facilitating and providing EU mobility.

This approach is condensed in the following **objectives**:

- To improve the overall quality of nZEB new constructions and renovations, based on BIM-enabled workplace learning, addressing the entire value chain in a cross-trades multidisciplinary approach
- To create a new generation of professionals and craftsmen, qualified to deliver high quality nZEB-projects by using technical, cross-trade and BIM skills and competences
- To foster interactions between different trades and professions enabled by a flexible qualification methodology for integrating technical, cross-trade and BIM related skills and competences into the workplace learning environment
- To sustain the qualification and training schemes a replication and exploitation strategy will be developed and validated

2.2 Methodology

The overall methodology of BIMplement is based on the direct implementation of the results of the related BUS and Construction Skills projects in combination with a direct implementation of the methodologies combining quality assurance with large scale qualification schemes. This will be brought into practice on local and regional scale, by demonstrating, testing and validating the methodology and effectiveness of qualification schemes in real projects. By using the existing local and regional networks of the project partners involved a large impact will be achieved within a short time.

The project phases in BIMplement are:

2.2.1 Development phase

BIMplement starts with the development of a BIM-enhanced Qualification Framework/methodology, executed on two dimensions:

- From the BUS and Construction Skills projects (such as BUS-NL, FR, LT and ES and H2020 PROF/TRAC) the approach for a EU Qualification Framework for performing nZEB professional activities will be adapted for:
 - Workers: filling the framework.

- Professionals: validation of the PROF/TRAC Qualification Framework and if needed extending or adapting this.
- Adding the cross-trade aspects OR interdisciplinary Skills
- Adding the BIM-process when performing nZEB professional activities. This includes the mapping of which extra skills and competences are needed to optimise the results in nZEB-construction and renovation projects, linked to the professional activities and the workers and professionals involved.

An overall matrix will be developed in which the five phases in the construction process are discriminated (programme, design, elaboration, realisation, operation & maintenance), and the professions and specialism involves including the levels. This matrix will be filled in with the skills and competences need for each profession/specialism and the related training schemes to acquire the necessary competences. The EQF methodology and guidelines for National Qualification Frameworks will be taken into account.

2.2.2 Implementation phase

The methodology and related qualification schemes will be implemented on a generic level for the subjects **Ventilation and Air tightness**. This matrix will be further elaborated for:

- the professions / specialisms and EQF levels involved in each phase;
- the required skills, competences and descriptors for the addressed technologies and technology components;

that are needed to enhance and ensure the quality of ventilation systems and air tightness. Next, this matrix will be linked to the available trainings.

BIM will be used as a universal carrier for all the information that is needed for the quality enhancement and related trainings. Moreover, in a next step, the matrix can be linked with 'real' projects, documented in BIM.

2.2.3 Pilots, demonstration and validation phase

Once elaborated, this Quality and Skills matrix will be made specific for each country involved in BIMplement. In the pilots reach involved country selects a number of projects in which the training and qualification, based on the matrix, will be executed and tested in practice. The pilots will be used for the verification of the matrix and the qualification schemes and give feedback to the previous steps. The pilots will also be used to test the value of BIM-enhanced tools to empower the different kinds of learning loops. Each project will start with a small scale local awareness campaign on the necessity of quality control and the role of new methodologies to achieve this such as BIM.

BIMplement aims for a mass large scale qualification implementation of the methodology in 30 – 35 construction and renovation projects in France, as a learning and replication case for the other countries, each executing about 5 projects. In total, the implementation and demonstration takes place in 50 projects.

2.2.4 Exploitation and replication phase

As the action is limited to training and qualification of professions involved in ventilation technologies and air tightness it is important to initiate and organize further exploitation and replication of the project to increase the number of skilled building professionals and craftsmen across the building

value chain. An exploitation strategy should support this and will lead to a continuation after the project duration. This exploitation plan facilitates:

- the upscaling of the methodology to other /new topics
- sustaining the used content within existing tools
- upscaling the action to other countries by a free and open methodology, implementation services and a shared open development platform.

For a fast and effective exploitation and promotion the existing PROF/TRAC open training platform will be used. Another important issue is the collaboration and connection with European umbrella associations (like REHVA, ACE and Housing Europe) and suppliers through EU networks (like EUBAC, EVIA, EHPA etc.). These networks will take care for the further upscaling of the methodology to other/new topics for their products and concepts within the platform.

2.3 Impact

BIMplement will achieve the following impact:

- Creation and implementation of sustainable qualification and training schemes for building professionals and/or blue collar workers
- Plans for sustainability after the project's life and replication across the EU
- Increase in the number of skilled workers (building professionals and/or blue collar workers)
- Improved collaboration and understanding across different trades and professional groups
- Demonstrated reduction in the gap between designed and actual energy performance through improved quality of construction in specific projects
- Measurable energy savings and/or renewable energy production resulting from improved skills
- Improved market recognition of skills in the building sector (industry standards)

3. Target Groups and Main Stakeholders

An important issue is the collaboration and connection with European umbrella associations (like ACE, REHVA and Housing Europe) and suppliers through EU networks (like EUBAC, EVIA, EHPA etc.).

ACE (Architects' Council of Europe) is directly involved in the project increasing its impact. The ACE dissemination channels are listed in section 4.6.1.

Housing Europe signed a letter of support for the BIMplement project in November 2017.

3.1 Letters of Support received during proposal stage

At the beginning of the project, the main target groups and stakeholders were identified. Table 1 shows the entities that signed the letter of support. A direct one-on-one communication will take place to the member entities below. This direct communication will strongly support a direct roll-out of the implementation of the project.

01 LETTERS OF SUPPORT

Organisation	Country
Dutch Building Information Council	Netherlands
AGA CAD	
Lithuanian Association of Civil Engineers	Lithuania
National Passive House Association Lithuania	Lithuania
Lithuanian Open BIM initiative	Lithuania
Polish Association of Construction Employers	Poland
Dutch Ketenstandard	Netherlands
BESCA, Spain	Spain
CYPE, Spain	Spain
Universitat Politècnica de València	Spain
Federacion Valenciana de Empresarios de la Construcción	Spain
Innovacion tecnologica BIM	Spain
building SMART, Spanish Chapter	Spain
Eurogypsum	Belgium
Housing Europe	Belgium
STABU	Netherlands
BPIE	Spain
AVS	Spain
COACV	Spain

3.2 Breakdown of identified Target groups and Key Actors

Tables 2-8 provide an overview of all identified target groups and main stakeholders. A more general and wider communication strategy will take place to them.

02 LOCAL GOVERNMENT

Organisation	Acronym
ICLEI Europe	ICLEI Europe
Energy Cities	Energy Cities
Covenant of Mayors	Covenant of Mayors
URBACT	URBACT
Eurocities	Eurocities

03 CENTRAL GOVERNMENT

Organisation	Acronym

European Student's Forum	AEGEE

4. Dissemination Channels

4.1 Internal communication

Project partners will use DROPBOX as a repository for project documents including official documents, deliverables and other background material, which is essential to project deployment. The structure in DROPBOX will be organized according to the work packages.

4.2 Website

The url of BIMplement official website is the following: <http://www.bimplement-project.eu/>

IVE as “WP6 – Communication” leader will undertake the handling of the Content Management System (CMS) of the website as administrator. BIMplement website has to be updated on a regular basis with the co-operation of all other partners regarding content provision and site population.

The project website, which is not only a repository of institutional information, but will be considered as a lively tool with continuously updated contents (news and press releases, original articles and interviews, posts of project-related news from external sources, cross-linking). The website is used as the main interface towards the main stakeholders (architects, engineers and technical experts), who are interested in the work and achievements of BIMplement, but also towards the public. See *annex 3*. The project website includes the following features:

- Short description of the project including its aims and results and highlighting the financial support from the Union.
- A repository for publications (articles, e-newsletters) and project documents (including reports, deliverables, promotional material, etc.).
- Cross-linking with and between existing networks and associations and portals of different stakeholders.
- Links to major websites and portals, including those managed by the European Commission and additional specific initiatives supported by the European Commission.
- The six monthly eNewsletters, which will be distributed not only to web registered users but will be made publicly available on the project website.
- The project brochure produced at two different stages: the first one at the beginning of the project to inform relevant stakeholder communities of the start of the project and its objectives and the second one on the project’s achievements
- The production and distribution of press and news releases each time the project will reach a milestone and produce a result that may be of interest for a larger audience
- Articles, interviews, news and press releases will not only be published on the project website but also distributed via information multipliers and thematic portals (such as BuildUp, Construction 21 and Construible) as well as through social media directly managed by the project and the partners (Twitter, Facebook, LinkedIn discussion groups).
- The set-up and animation of the project Social Media accounts to ensure adequate coverage of project activities on the social networks, aiming at both professional and public networks, thus guaranteeing sustainability of the community also after the termination of the project.
- Complete information about the training offer: dates, place, content, modality, duration, objective, instructions for registration

4.3 Social media

In BIMplement project it is advisable to use social media to bridge disciplinary boundaries, to engage in knowledge exchange with partners and stakeholders, and to provide a channel for the public communication of their research.

Social and professional networking tools nevertheless offer a range of opportunities to researchers. Perhaps first and foremost they provide a way to keep track of people connected to you professionally. If you become an active user they can also offer opportunities to build and maintain professional relations and provide a forum for collaboration.

In order to make BIMplement more widely available the project will use the following:

- **Twitter** (www.twitter.com) is the clear market leader, a general tool used for a wide range of purposes. The discussion that you participate in will vary depending on who you are following and how you engage with them. MICROBLOGGING. [@H2020BIMplement](https://twitter.com/H2020BIMplement)
- **Facebook** (www.facebook.com) is still the market leader. Many people use it mainly for social rather than professional activity. SOCIAL AND PROFESSIONAL NETWORKING TOOLS. [H2020 BIMplement page](#)
- **LinkedIn** (www.linkedin.com) is a professional networking site. It is more popular in business than in academia but offers a range of functionality that suggests it may be useful for researchers. SOCIAL AND PROFESSIONAL NETWORKING TOOLS. [BIMplement H2020 EU group](#)

Social media are particularly useful in disseminating information. Whatever you feel about changing the way you do your research or about the challenges to scholarly quality assurance processes, the idea of disseminating your research more widely and more effectively is probably appealing. Social media are above all about communication and are therefore ideal for researchers who wish to make their research more widely available.

4.4 E-newsletter

BIMplement will use **MailChimp** for creating and managing mailing lists, newsletters and automated campaigns. MailChimp is the most famous email marketing software (EMS). It's simple and easy to use and gives you a number of easy options for designing, sending and saving templates of your emails. See *annex 4*.

The electronic versions of the newsletter will be available in English. Versions will also be made in the national languages as long as the partners translate the texts and send them to the IVE.

E-newsletters will be made available on the project website, in order to improve visibility of the project via electronic means, and sent out via e-mail to consortium partners and other registered stakeholders, whose contact lists are directly managed by the project. The consortium partners will also distribute the newsletter to their networks, which are not directly managed by the project.

4.5 E-learning platform

A specific space will be created in **Moodle** to host the courses of the different partners, if needed. The organizing partner of the course must deliver to the IVE the list of students with their contact information and teaching material (documents, videos, audios, etc.). The organizer will have an advanced role within the course with permission to edit content and evaluate students.

Moodle is a free and open-source learning management system (LMS). Developed on pedagogical principles, Moodle is used for blended learning, distance education, flipped classroom and other e-learning projects in schools, universities, workplaces and other sectors.

With customizable management features, it is used to create private websites with online courses to achieve learning goals. Moodle (acronym for modular object-oriented dynamic learning environment) allows for extending and tailoring learning environments using community sourced plugins.

@ISSO aNewSpring is used as e-learning platform. During the project ways will be explored on how to combine for the Netherlands the use of Moodle and aNewSpring.

4.6 Dissemination material

4.6.1 Visual identity

Image, recognition, and impact are elements of paramount importance in graphic design. The visual elements which have been designed taking into account the need to incorporate existing graphic illustration of logos of related projects and partners. The visual identity elements, present in all communication tools, will communicate the BIMplement vision and the success of the initiative, in which the European Union plays a central role.

Professionally conceptualized and designed, the visual identity will not fail the test of time, thus, ensuring consistency and longevity for the initiative. The logo, the colours, the typeface, the imagery and photography is in harmony and is graphically representative of all objectives on all developed materials and strategies. There is an esthetical coordination with PROF/TRAC platform. See *annex 2 and 5*.

4.6.2 Templates

To ensure a common visual identity for the project, the designer has created two templates: for A4 reports (word file) and for Power Point presentations (ppt file). See *annex 6 and 7*.

4.6.3 Brochure

There will be two project brochures produced at two different stages: the first one at the beginning of the project to inform relevant stakeholder communities of the start of the project and its objectives and the second one on the project's achievements.

The electronic versions of the brochure will be available in English. Versions will also be made in the national languages as long as the partners translate the texts and send them to the IVE.

4.6.4 Other dissemination material

The project will also produce other printed materials, such as 1 poster and 1 project rollup to be displayed during fairs, conferences and workshops.

4.7 Existing Dissemination Channels

4.7.1 Architects' Council of Europe (ACE)

- Newsletters: the ACE-info is the quarterly electronic newsletter of the ACE distributed by email to 3.500 direct contacts. Information about the project will be provided, links to download the submitted deliverables and announcements concerning the planned events. There will be a special focus in promoting developed training workshops, inviting architects to attend the relevant events.

- ACE alerts: Email alerts with important news and events not to be missed are sent every 2 months to the ACE network (3.500 direct email contacts including the 47 MOs). Through these alerts the ACE will promote the project events and workshops to take place at national and EU level.

- ACE Website and other web-based channels: description of the project, in English and French, will be included in the webpage of the Architects' Council of Europe (www.ace-cae.eu), along with the logo of the project and link redirecting to the project website. Information and news about the project will also be regularly uploaded in the [ACE Facebook page](#) as well as to the LinkedIn Groups of: "Urban Issues", "Environment and Sustainable Architecture" all run by the ACE.

- Internal events: the project objectives and progress will be regularly presented to Work Group meetings of the ACE: Work Group [Responsible Architecture and Urban CPD](#) issues, Work Group regarding [CPD](#). Other events during which the project progress will be presented and discussed: ACE General Assembly taking place twice every year and which is attended by around 100 architects, all delegates of the ACE member organizations; two General Coordination Meetings and six Executive Board Meetings.

- External events: Externally we can promote the project during the consortium meetings of the other EU funded projects we are involved in: A2PBEER, Erasmus+, PROF/TRAC and ABRACADABRA taking place each twice a year.

4.7.2 The planned participants' dissemination channels

- AVE FR: <https://www.ville-emploi.asso.fr/bimlement-projet-europeen-lalliance-villes-emploi/>

- ASTUS FR: www.astus-construction.fr/7085-partenaires.htm

- ISSO NL: ISSO-info, ISSO-enews, Twitter, LinkedIn, Topsector Energy, Uneto-VNIBIM-campus & BIM-loket

- HIA NL: Dutch/Flemish Building physics society magazine, TVVL magazine

- RIMC LT: ENERGOTRAIN LinkedIn, www.energinisefektyvumas.lt, presentations in subject related conferences

- LSA LT: LSA website, news, construction related journals, press releases

- IVE SERVEF ES: Construible, ECOCONSTRUCCIÓN

- MOW PL: The Polish Association of Construction Employers; The MOST (company magazine)

5. Communication Activities

5.1 Events

The project outcomes will be further disseminated through presentations at local, national and international conferences, seminars, fairs, and other new dissemination formats. It is envisaged to have a contribution to at least 2 international conferences. The presentations of the project results will be independent from the training events, as they have different scopes and target groups.

All partners will contribute to the activity and organize events. BIMplement will also participate to external events. IVE will send all partners a reminder email at the beginning of every month in order to have the events calendar updated. In addition to big events partners should also report more private events (e.g. work meetings).

Whenever a partner participates in an event, the following steps must be followed:

- Notify at least one month in advance to IVE by email (pesparza@five.es / mnavarro@five.es) in order to publish it asap on the website.
- Fill in the excel "BIMPLEMENT_DisseminationActivities" in Dropbox / WP6.
- Create a folder with the date and entity in Dropbox / WP6 / EVENTS (for example: 180306_IVE).
- Inside the folder, add the template fulfilled. You can download the template from: Dropbox / WP6 / EVENTS
- Inside the folder, add images too (logos, promotional images, photos during the event, etc.).
- During the event, remember to tweet and mention @BIMplement.
- After the event, please write a short piece of news with relevant information (attendees, minutes, agreements reached, key ideas, etc.). Upload it to the folder.

The "EVENT template" must contain the following fields at least:

- Organizer & contact person
- Date
- Title
- Place
- Time
- Link
- Description
- Comments

It can also be included other documentation e.g. papers, presentation, photos, proceedings, minutes, etc.

5.2 Training courses

Each pilot will promote the courses by its involved partners via their own channels and present the BIMplement results in national level events in local language.

The courses will be disseminated through the project website and social networks. For this, the organizers must follow the same steps as those indicated in "Events" (see section 5.1).

For online courses, the IVE may create a space in Moodle if necessary for the use of partners who need it. Moodle is a learning platform designed to provide educators and learners with a secure and integrated system to create personalised learning environments. A simple interface, drag-and-drop features, and well-documented resources along with ongoing usability improvements make Moodle easy to learn and use.

5.3 National workshops

5 national workshops will be carried out to present relevant findings. The aim is to bring the results to the national target groups (suppliers, building constructors, Installers, Real Estate Developers and Housing companies) by making them aware of the contents and benefits of the developed framework and the outcomes of the project results.

5.4 Proactive Communication

Through one-to-one communication, meetings, emails and participation at events of relevant stakeholders.

5.5 Clustering Activities

With other European projects, European and National Technology Platforms and related associations.

6. Report on undertaken Dissemination Activities

There will be a regular reporting every six months on the forecast of planned and undertaken dissemination activities for each consortium partner. Table 9 summarises all dissemination activities undertaken by the consortium partners during the first 6 months of the project. Obviously these were not a lot as the dissemination material was still under development and there was not yet enough project output or progress to report on.

In addition to this all consortium partners are in future requested to fill in a brief dissemination report form after each dissemination activity conducted. These will be included in the annex of the annual up-date of the dissemination and communication guide.

Date (yymmdd)	Responsible Partner/ Author(s)	Type of Activity: (1)	Location	Title of event/ publication	Number of persons reached	Type of audience reached (2)	Countries addressed

BIMPLEMENT OBJECTIVES

Nearly Zero Energy Building (nZEB) construction and renovation need an enhanced systematic approach for the quality control of the entire process. To reduce the gap between designed (predicted) and actual performances of buildings, the implementation of BIM models will enhance the collective intelligence generated by the cross-level and cross-trade project approach. The methodology will be applied to obtain a better energy efficiency and indoor environmental quality.

[read more](#)

CONSORTIUM

The consortium is composed of partners, concentrated in five countries (France, Netherlands Lithuania, Spain and Poland) with experience in previous BUS projects and establishing the national BUS roadmaps. Every partner represent the building and/or installation sector and organisations, responsible for developing and organising large scale trainings and qualifications schemes.

BIMPLEMENT METHODOLOGY

The most important part of this enhanced quality control approach is a fully qualified and equipped workforce, capable to implement, execute and perform all the necessary labor actions with a full understanding of the responsibility of their own profession and actions, as well as the relation with the other involved professions and actions within the value chain.
