

14. Annex 3 : Table for the BIMplement project classifications “maturity scan”

This table is composed of 6 sheets to be filled up by the BIMplement Master trainer. One is related to the project context and available BIM documents and specifications, the other ones present how to identify the BIM and nZEB stakeholders skills.

Synthesis	Project	BIM skills	nZEB awareness & skills	ventilation airtightness skills	BIM documents & tools
-----------	---------	------------	-------------------------	---------------------------------	-----------------------

Illustration 65: the different sheets of the “project identification and skills table”

The first sheet is a “synthesis” (here below) of all of these sheets. It give a general view of the project. A template of this “maturity scan table” is available on the www.BIMplement-project.eu site, on the PROF/TRAC site, and in D5.5.

name of the project			TEST – V13.1				BIMplement					
place :			xxx	France

Illustration 66: syntheses of project information

Each sheets is a question table that can be filled in easily by the trainers, whose answers are automatically transferred in the above synthesis table.

The original and innovative point in this table is a detailed and precise explanation of what are the skills required by each of the project stakeholders, and what should be the content of BIM specifications and BEP to implement a coherent level of BIM use by all stakeholders, in particular building companies and on-sire workers.

The following illustrations shows the sheet “BIM skills”

Illustration 67: sheet “BIM skills” for all stakeholders

Illustration 68: sheet “BIM documents” for all project phases

BIM_Skills_low_1		You can create a 3D object model with your software.		Project manager Ventilation_low_2		
BIM_Skills_basic_2		You can export/import a 3D model to collaborate with several business entities (model software family and/or BCF) requested in the project owner's specifications. You can manage and use a collaborative platform. You can participate in the writing of a basic BEP for building companies within the framework of the call for bid, and help them collaborate in a BIM process, even if these companies do not need to design a BIM model and you will assume the execution plans of the BIM models.		Architect		
BIM_Skills_medium_3		You can draft a detailed BEP for building companies that have to design their own BIM models.		BIM_Skills_advance d_4		
BIM_Skills_advanced_4		You can work with the BIM manager to check/modify the different BIM models of the project during the synthesis phase. You can create complex BIM models for the execution phase, according to client's requirements. You can draft a detailed BEP, including requirements for a as-built BIM model, and verify its quality.				
BIM_Skills_expert_5						
BIM_Skills_nothing_0		You only make 2D plans		Technical design office		
BIM_Skills_low_1		You know how to create a 3D object model with your trade software.				
BIM_Skills_basic_2		You know how to create a 3D object model with your trade software, using models from project manager stakeholders. You know how to design a BIM model that conforms to the data requested in the project owner's specifications. You can make changes to the BIM model execution file following companies feedback.		Structural		
BIM_Skills_medium_3		You know how to work with the BIM manager to check/modify the project different BIM models, during the synthesis phase.		MEP		
BIM_Skills_advanced_4		You can create complex BIM models for the execution phase, according to the client's requests. You can draft your own BEP to optimize collaboration within the project manager.		other		
BIM_Skills_expert_5				BIM_Skills_advance d_4		
				BIM_Skills_advanced_5		
				BIM_Skills_advance d_4		
BIM_Skills_nothing_0		You have no knowledge about BIM.				
BIM_Skills_low_1		You have no software to create 3D models and design only 2D plans You have a general awareness of BIM (knowledge of the stakes and future uses for building companies). You use a viewer only to get a global view of the project		supervision team OU TECHNICAL TEAMS Of building companies		
BIM_Skills_basic_2		You know how to use viewers to analyze the project manager's BIM models. You can propose a list of documents to be added to the model (by the project manager a viewer and/or a collaborative platform to exchange on the project (BCF or eq. format) with the project manager.		Structure, exterior joinery		
BIM_Skills_medium_3		You know how to link technical documents on a BIM model for a better on site implementation.		MEP		
BIM_Skills_advanced_4		You can design your own 3D trade model or a basic BIM model. You are able to participate in a synthesis process		Other/interior work		
				BIM_Skills_basic_2		
				BIM_Skills_basic_2		

Illustration 67 : BIM skills

BIM_Skills_expert_5	You are able to design a BIM model that meets the requirements of the BFP (geometry, properties, documents), including the as-built BIM model.		
BIM_Skills_nothing_0	You don't have any BIM practice.		
BIM_Skills_low_1	You only use 2D drawings		
BIM_Skills_basic_2	You are able to visualize a project with a viewer, in order to understand the whole project		
BIM_Skills_medium_3	You have an active practice of viewers or a collaborative platform, and know how to read and use documents linked to BIM model objects.		
BIM_Skills_advanced_4	You are able to use viewers or a collaborative platform for collaboration via notes or BCF files.		
BIM_Skills_expert_5	You are able to use all the BIM tools that can be used in a BIM process for the execution phase of the process		

On-site workers – Site manager, site foremen

15. Annex 4 : BIM and building companies

Mind Map 1 : BIM on the building site - roles of building companies managers and employees in terms of on-site BIM (2 pages)

This mind map give a detailed view of what the different building companies employees have to care about in terms of BIM for a construction project. These details are given for :

- the contractor's design office
- the General/works foreman
- the on-site blue collar workers and craftsmen
- and other stakeholders working on site

The following illustration presents priority markers, ranging from 1 to 4, which correspond to the different levels companies may reach : level 1 is the minimum first acces to BIM , and level 2 corresponds to the BIM skills level 2 of the maturity scan.

Markers 3 and 4 shows the kind of evolution building companies may have within BIM processes.

Illustration 69: BIM process ans BIM use for building companies
